

AMS Application Profile

Orion Claims Operations Hub

DEMONSTRATION DOCUMENT All names, identifiers, contacts, systems, metrics and dates in this document are fictional and intended only for application KT planning demonstrations.

Document control	Value
Document ID	DEMO-AMS-OCOH-001
Version	1.0
Document owner	Neha Kulkarni (fictional)
Classification	Internal - Demo
Prepared for	Application Knowledge Transfer Planning
Status	Draft for demonstration

Application Transition & Knowledge Transfer Profile

1. Executive Summary

Orion Claims Operations Hub is a fictional enterprise application used by claims operations teams to register, validate, route and settle commercial vehicle claims. The transition focuses on stable production support, incident reduction, runbook maturity and predictable service reporting.

Transition objective Enable the incoming AMS team to independently monitor, support, troubleshoot and recover the production service while meeting agreed operational controls.

2. Application Setup

Field	Value
Application Name	Orion Claims Operations Hub
Service Model	AMS Level 2 - Operate and Optimize
Business Domain	Insurance Claims Operations
Business Owner	Arvind Rao (fictional)
Application Owner	Neha Kulkarni (fictional)
Service Criticality	Business Critical - Tier 2
User Footprint	Approx. 1,850 internal users
Primary Regions	India, Germany and Czech Republic
KT Start Date	05-Oct-2026
Timezone	IST with CET overlap
Working Days	Monday-Friday
Working Hours	09:00-18:00 IST
Follow-up Sessions	3
Shadow Days	10
Reverse Shadow Days	5

3. Scope and Service Boundaries

In Scope

- L2 application support and incident resolution
- Service request fulfilment and access coordination
- Batch monitoring, interface reconciliation and daily health checks
- Problem management, root-cause analysis and known-error maintenance
- Minor configuration changes and approved maintenance releases

Out of Scope

- Major product features or business process redesign
- Cloud landing-zone ownership and corporate network operations
- L1 service desk activities
- Vendor contract and license negotiations

4. Team and Governance

Role	Name	Location	Responsibility
Service Owner	Neha Kulkarni	Pune	Service governance, SLA oversight and escalation
Lead SME	Markus Vogel	Munich	Business process and production decision support
Technical SME	Isha Nair	Bengaluru	Java services, integrations and troubleshooting
Database SME	Rohan Mehta	Pune	PostgreSQL performance, backup and recovery
Incoming Lead	Kavya Shah	Gurugram	KT coordination and support handover

Governance Cadence

Forum	Cadence	Participants	Purpose
Daily Operations	Weekdays	AMS lead, SMEs	Review incidents, batches and risks
Service Review	Monthly	Owners and leads	SLA, trends, problems and improvements
CAB Review	Weekly	Change stakeholders	Assess implementation and rollback readiness

5. Architecture and Technology Profile

Layer	Technology / Service	Operational Notes
Web	Angular 17	Hosted through Azure App Service; Entra ID SSO
API	Java 21 / Spring Boot 3	Six stateless services with health endpoints
Database	Azure Database for PostgreSQL 16	Zone-redundant production tier; PITR enabled
Messaging	Azure Service Bus Premium	Claims events and retry/dead-letter handling
Storage	Azure Blob Storage	Encrypted claim documents and export files
Observability	Azure Monitor and Application Insights	Central dashboards, alerts and dependency traces

Interfaces and Data Flows

Interface ID	System	Direction	Protocol	Frequency	Owner
IF-01	Policy Master	Inbound	REST/mTLS	Real time	Integration Team
IF-02	Payment Gateway	Outbound	REST/OAuth2	Real time	Finance IT
IF-03	Document Archive	Bidirectional	SFTP	Every 15 min	AMS
IF-04	Data Warehouse	Outbound	CSV/SFTP	Daily 02:00 CET	Data Platform

6. Service Targets and Controls

Measure	Target	Threshold / Control	Reporting
Availability	99.7% monthly	Excludes approved maintenance	Monthly review
P1 response	15 minutes	24x7 on-call acknowledgement	Incident report
P1 restore	4 hours	Workaround or service recovery	Incident report
Batch success	By 06:00 CET	All critical jobs complete	Daily health check

Monitoring and Alerting

- Availability, latency and failure-rate alerts routed to the AMS action group
- Dead-letter queue alert at more than 50 messages for 10 minutes
- Database CPU warning at 75% for 15 minutes and critical at 90%
- Daily synthetic claim registration and payment-status checks

7. Knowledge Transfer Topic Plan

#	Topic	Category	Primary SME	Planned Outcome
1	Business process and support model	Business	Markus Vogel	Explain claim lifecycle and support boundaries
2	Incident and escalation handling	Functional	Neha Kulkarni	Execute severity assessment and communications
3	Application architecture	Technical	Isha Nair	Trace a request across all services
4	Batch and interface operations	Technical	Isha Nair	Operate reconciliations and failed-file recovery
5	Database recovery	Technical	Rohan Mehta	Demonstrate restore validation and failover steps
6	Monitoring and troubleshooting	Technical	Isha Nair	Use dashboards, logs and correlation IDs

8. Operational / Delivery Workflows

P1 Incident Response

1. Acknowledge the alert and open the major incident bridge.
2. Validate user impact using synthetic checks, telemetry and business confirmation.
3. Apply the approved recovery runbook or rollback, with decision log updates.
4. Confirm service restoration and monitor for 30 minutes.
5. Publish the incident summary and initiate root-cause analysis.

Daily Health Check

1. Review overnight batch completion and interface reconciliations.
2. Check alert backlog, dead-letter queues and database capacity.
3. Record exceptions in the operational log and assign owners.

9. Risks, Dependencies and Readiness

ID	Type	Description	Impact	Mitigation / Next Step	Owner
R-01	Risk	Two legacy SFTP partners use manual certificate renewal	High	Create 60-day expiry alerts and dual ownership	AMS Lead
R-02	Dependency	Payment sandbox is unavailable on weekends	Medium	Schedule reverse-shadow testing on weekdays	Finance IT
R-03	Risk	Three runbooks lack rollback evidence	Medium	Execute tabletop validation before handover	Tech SME

Readiness Checklist

Area	Status	Evidence / Comment
Mandatory fields	Complete	Application setup, dates, timezone and ownership populated
Production access	In progress	Read-only access approved; privileged access pending
Runbooks	In progress	14 of 17 reviewed in the demo scenario
Monitoring	Complete	Dashboards and alert routing demonstrated
Reverse shadow	Planned	Five working days reserved after shadow phase

10. Planned Holidays and Coverage Notes

Date	Coverage Note
02-Oct-2026	India support coverage through on-call roster; planned KT paused.
20-Oct-2026	Regional holiday coverage; P1/P2 support only.
25-Dec-2026	Global holiday; change freeze and emergency support model.

11. Acceptance Criteria

- Incoming team resolves two simulated incidents without SME intervention.
- Daily health check is completed for five consecutive working days.
- All critical runbooks have owner, version, rollback and evidence reference.
- Escalation matrix and on-call routing are validated through a test notification.

Approval note This demonstration profile is considered KT-ready when mandatory application setup fields are complete, topic owners are assigned, critical access is validated, and evidence links are recorded.
